-About Paint.NET-

Paint.NET is a freeware raster graphics editing program for Microsoft Windows, developed on the .NET Framework. Originally created as a Washington State University student project, Paint.NET has evolved from a simple replacement for the Microsoft Paint program, which is included with Windows, into a powerful editor with support for layers, blending, transparency, and plugins. *"From [WikiPedia](#)"* (It is easier than Adobe Photoshop & it is a free software.)
